

ABSTRACT OF THE DISCLOSURE

VIDEO PROCESSING

5

A video processing method for preparing an anti-aliased foreground image for display over an image background comprises the steps of:

- (i) preparing the image background for display;
- (ii) generating an original foreground image by manipulation of a contiguous
10 group of graphics primitives;
- (iii) applying anti-aliasing filtering to the edges of each primitive to generate a primitive-processed image;
- (iv) superposing the primitive-processed image over the image background; and
- (v) superposing the original foreground image over the primitive-processed image.
